

*The road to a rewarding career in the uranium mining business starts here...*

## Denison Mines

On September 24, 2018, Denison (TSX: DML)(NYSE American: DNN) announced the results of a Pre-Feasibility Study (PFS) for the Wheeler River Project. The PFS incorporates new and innovative approaches to mining in the Athabasca Basin, including the In-Situ Recovery (ISR) mining method for the high-grade Phoenix deposit.

The selection of ISR mining for the Phoenix deposit is a potentially defining moment for Denison, as we work to bring the world's lowest cost uranium mining method to the jurisdiction hosting the world's highest-grade uranium deposits.

The result is a truly exciting project that has the potential to be the lowest cost uranium mining operation in the world and one of the most environmentally friendly mines globally.

*Denison is building its Saskatoon based project development team and is looking to attract top candidates who want to be a part of our entrepreneurial company*

### **ENVIRONMENTAL MANAGER**

Responsibility to lead a team of staff and consultants, working with project engineers to draft the environmental impact statement, oversee the baseline data collection program, support on-going field work and feasibility engineering, and develop licensing documents. This position will require regular interaction with federal and provincial regulators.

A leader with a strong sense of integrity, ethics and a desire to protect the environment. You have strong technical skills in your area of expertise and are able to think holistically about potential effects of project activities on the environment.

*Based in Denison's Saskatoon office, with travel to the Athabasca Basin region.*

### **PROJECT SERVICES COORDINATOR**

Responsibility to ensure that all budgeting, scheduling and coordination processes run smoothly. To actively monitor and generate progress reports for the Wheeler River project. The work will include monthly and quarterly cost forecasting and control, contract administration, schedule management, data management, and support to the project development team.

A self-starter and creative problem solver. You are logical, pragmatic and thorough while also being flexible and innovative. You have good organizational skills, a strong sense of responsibility and demonstrated ability to work in a team environment.

*Based in Denison's Saskatoon office, with travel to the Athabasca Basin region.*
